

Teaching TRIZ to Children

By Murashkovsky Jurgis

A distinctive feature is that it gives children an opportunity to get to that need solutions. Not imposed truths, but are given the opportunity themselves to reach the conclusion that it is necessary to devise a method of solving the problem. As part of the training, the children are given the task to develop the talented thinking qualities (KTM), to solve problems, the methods of the invention, as well as an integral part of the training - the solution of personal problems and concerns. As a result, teaching children to develop a KTM, can choose or create methods for solving problems and safely solve their problems faced on a daily basis.
